## Exercise 3 - Debugging FizzBuzz

[Overview](#)[My Submissions/Test Runs](#)

### Instructions

- Read this the code in main.py
- Spot the problems 🐛.
- Modify the code to fix the program.
- No shortcuts - don't copy-paste to replace the code entirely with a working solution.

The code needs to print the solution to the FizzBuzz game.

Your program should print each number from 1 to 100 in turn.

When the number is divisible by 3 then instead of printing the number it should print "Fizz".

When the number is divisible by 5, then instead of printing the number it should print "Buzz".

And if the number is divisible by both 3 and 5 e.g. 15 then instead of the number it should print "FizzBuzz"

### Hint

There is more than one fix required.

### Test Your Code

Check your code is doing what it is supposed to. When you're happy with your code, click submit to check your solution.
