Interactive Coding Exercises

Exercise 4 - FizzBuzz

Overview

My Submissions/Test Runs

Instructions

You are going to write a program that automatically prints the solution to the FizzBuzz game.

Your program should print each number from 1 to 100 in turn.

When the number is divisible by 3 then instead of printing the number it should print "Fizz".

When the number is divisible by 5, then instead of printing the number it should print "Buzz".`

And if the number is divisible by both 3 and 5 e.g. 15 then instead of the number it should print "FizzBuzz"

e.g. it might start off like this:

.... etc.

Hint

- 1. Remember your answer should start from 1 and go up to and including 100.
- 2. Each number/text should be printed on a separate line.

Test Your Code

Check your code is doing what it is supposed to. When you're happy with your code, click submit to check your solution.
